# Contents

Preface .....	xvii
Acknowledgments .....	xix
Abbreviations and Symbols .....	xxi
<b>1 Introduction .....</b>	<b>1</b>
Purpose of This Book .....	1
Safety of Formwork .....	2
Economy of Formwork .....	2
Allowable Unit Stresses in Formwork Material .....	2
Care of Forms .....	3
Patented Products .....	3
Arrangement of This Book .....	3
References .....	6
<b>2 Economy of Formwork .....</b>	<b>7</b>
Background Information .....	7
Impact of Structural Design on Formwork Costs .....	7
Suggestions for Design .....	9
Design Repetition .....	10
Dimensional Standards .....	10
Dimensional Consistency .....	11
Economy of Formwork and Sizes of Concrete	
Columns .....	11
Beam and Column Intersections .....	12
Economy in Formwork and Sizes of	
Concrete Beams .....	13
Economy in Making, Erecting, and	
Stripping Forms .....	14
Removal of Forms .....	15
Building Construction and Economy .....	16
Economy in Formwork and Overall Economy .....	19
References .....	20
<b>3 Pressure of Concrete on Formwork .....</b>	<b>21</b>
Behavior of Concrete .....	21
Lateral Pressure of Concrete on Formwork .....	22
Lateral Pressure of Concrete on Wall Forms .....	23
Example 3-1 .....	24
Example 3-2 .....	25
Example 3-3 .....	26

**vi Contents**

Relationship between Rate of Fill, Temperature, and Pressure for Wall Forms .....	28
Lateral Pressure of Concrete on Column Forms ...	31
Example 3-4 .....	31
Example 3-5 .....	32
Example 3-6 .....	33
Relationship between Rate of Fill, Temperature, and Pressure for Column Forms .....	33
Graphical Illustration of Pressure Equations for Walls and Columns .....	33
Effect of Weight of Concrete on Pressure .....	36
Vertical Loads on Forms .....	36
Example 3-7 .....	38
Example 3-8 .....	38
Example 3-9 .....	38
Placement and Consolidation of Freshly Placed Concrete .....	39
Wind Loads on Formwork Systems .....	39
References .....	39
<b>4 Properties of Form Material .....</b>	<b>41</b>
General Information .....	41
Properties of Lumber .....	41
Allowable Stresses of Lumber .....	44
Adjustment Factor $C_D$ for Load-Duration .....	46
Adjustment Factors $C_M$ for Moisture Content .....	46
Adjustment Factor $C_L$ for Beam Stability .....	51
Adjustment Factor $C_P$ for Column Stability .....	51
Adjustment Factors $C_{fu}$ for Flat Use .....	52
Adjustment Factors $C_b$ for Bearing Area .....	52
Application of Adjustment Factors .....	53
Example 4-1 .....	53
Example 4-2 .....	53
Plywood .....	54
Allowable Stresses for Plywood .....	55
Plyform .....	55
High-Density Overlaid Plyform .....	60
Equations for Determining the Allowable Pressure on Plyform .....	60
Allowable Pressure Based on Fiber Stress in Bending .....	62
Allowable Pressure Based on Bending Deflection .....	63
Allowable Pressure Based on Shear Stress .....	63

Allowable Pressure Based on Shear Deflection . . . .	63
Tables for Determining the Allowable Concrete Pressure on Plyform . . . . .	64
Maximum Spans for Lumber Framing Used to Support Plywood . . . . .	64
Use of Plywood for Curved Forms . . . . .	66
Hardboard . . . . .	66
Fiber Form Tubes . . . . .	72
Steel Forms . . . . .	72
Aluminum Forms . . . . .	73
Plastic Forms . . . . .	73
Form Liners . . . . .	74
Nails . . . . .	74
Withdrawal Resistance of Nails . . . . .	75
Lateral Resistance of Nails . . . . .	75
Toe-Nail Connections . . . . .	77
Connections for Species of Wood for Heavy Formwork . . . . .	78
Lag Screws . . . . .	78
Withdrawal Resistance of Lag Screws . . . . .	78
Lateral Resistance of Lag Screws . . . . .	79
Timber Connectors . . . . .	82
Split-Ring Connectors . . . . .	82
Shear-Plate Connectors . . . . .	83
Split-Ring and Shear-Plate Connectors in End Grain . . . . .	84
Penetration Requirements of Lag Screws . . . . .	84
Form Ties . . . . .	85
Concrete Anchors . . . . .	85
References . . . . .	86
<b>5 Design of Wood Members for Formwork . . . . .</b>	<b>87</b>
General Information . . . . .	87
Arrangement of Information in This Chapter . . . . .	87
Lumber versus Timber Members . . . . .	88
Loads on Structural Members . . . . .	89
Equations Used in Design . . . . .	89
Analysis of Bending Moments in Beams with Concentrated Loads . . . . .	90
Analysis of Bending Moments in Beams with Uniformly Distributed Loads . . . . .	91
Bending Stress in Beams . . . . .	92
Stability of Bending Members . . . . .	93

**viii Contents**

Examples of Using Bending Stress Equations for Designing Beams and Checking Stresses in Beams	95
Example 5-1	95
Example 5-2	96
Example 5-3	97
Horizontal Shearing Stress in Beams	98
Example 5-4	99
Example 5-5	99
Modified Method of Determining the Unit Stress in Horizontal Shear in a Beam	100
Example 5-6	102
Example 5-7	103
Deflection of Beams	104
Deflection of Beams with Concentrated Loads	105
Deflection of Single-Span Beams with Concentrated Loads	106
Example 5-8	107
Multiple-Span Beam with Concentrated Loads	108
Deflection of Beams with Uniform Loads	109
Single-Span Beams with Uniformly Distributed Loads	109
Example 5-9	110
Deflection of Multiple-Span Beams with Uniformly Distributed Loads	111
Table for Bending Moment, Shear, and Deflection for Beams	111
Calculating Deflection by Superposition	113
Example 5-10	113
Example 5-11	114
Allowable Span Length Based on Moment, Shear, or Deflection	115
Allowable Span Length for Single-Span Members with Uniformly Distributed Loads	116
Allowable Span Length for Multiple-Span Members with Uniformly Distributed Loads	116
Stresses and Deflection of Plywood	117
Allowable Pressure on Plywood Based on Bending Stress	118
Example 5-12	120
Example 5-13	120
Example 5-14	121
Allowable Pressure on Plywood Based on Rolling Shear Stress	121
Example 5-15	122

Allowable Pressure on Plywood Based on Deflection Requirements .....	123
Allowable Pressure on Plywood due to Bending Deflection .....	123
Example 5-16 .....	125
Allowable Pressure on Plywood Based on Shear Deflection .....	125
Example 5-17 .....	126
Tables of Equations for Calculating Allowable Span Lengths for Wood Beams and Plywood Sheathing .....	127
Compression Stresses and Loads on Vertical Shores ....	127
Example 5-18 .....	131
Table for Allowable Loads on Wood Shores .....	132
Bearing Stresses Perpendicular to Grain .....	132
Design of Forms for a Concrete Wall .....	135
Lateral Pressure of Concrete on Forms ....	136
Plywood Sheathing to Resist Pressure from Concrete .....	136
Studs for Support of Plywood .....	138
Wales for Support of Studs .....	140
Strength Required of Ties .....	142
Design Summary of Forms for Concrete Wall ....	143
Minimum Lateral Force for Design of Wall Form Bracing Systems .....	144
Bracing for Wall Forms .....	144
Example 5-19 .....	146
Example 5-20 .....	148
Design of Forms for a Concrete Slab .....	149
Loads on Slab Forms .....	150
Plywood Decking to Resist Vertical Load ....	151
Joists for Support of Plywood .....	152
Stringers for Support of Joists .....	154
Shores for Support of Stringers .....	156
Minimum Lateral Force for Design of Slab Form Bracing Systems .....	159
Minimum Time for Forms and Supports to Remain in Place .....	159
Minimum Safety Factors for Formwork Accessories .....	160
References .....	162
<b>6 Shores and Scaffolding .....</b>	<b>163</b>
General Information .....	163
Shores .....	163

## **x Contents**

Wood Post Shores .....	165
Patented Shores .....	166
Ellis Shores .....	166
Symons Shores .....	168
Site Preparation for Shoring .....	170
Selecting the Size and Spacing of Shores .....	170
Tubular Steel Scaffolding Frames .....	174
Accessory Items for Tubular Scaffolding .....	177
Steel Tower Frames .....	177
Safety Practices Using Tubular Scaffolding .....	179
Horizontal Shores .....	180
Shoring Formwork for Multistory Structures .....	182
References .....	183
<b>7 Failures of Formwork .....</b>	<b>185</b>
General Information .....	185
Causes of Failures of Formwork .....	185
Forces Acting on Vertical Shores .....	186
Force Produced by Concrete Falling on a Deck .....	187
Example 7-1 .....	189
Motor-Driven Concrete Buggies .....	190
Impact Produced by Motor-Driven Concrete Buggies .....	191
Design of Formwork to Withstand Dynamic Forces .....	193
Examples of Failure of Formwork and Falsework .....	193
Prevention of Formwork Failures .....	194
References .....	195
<b>8 Forms for Footings .....</b>	<b>197</b>
General Information .....	197
Forms for Foundation Walls .....	197
Example 8-1 .....	198
Procedure for Erection of Forms for Footings .....	202
Forms for Grade Beams .....	204
Forms for Concrete Footings .....	204
Additional Forms for Concrete Footings .....	205
Forms for Stepped Footings .....	207
Forms for Sloped Footings .....	208
Forms for Round Footings .....	208
Placing Anchor Bolts in Concrete Foundations .....	210
<b>9 Forms for Walls .....</b>	<b>211</b>
General Information .....	211
Definition of Terms .....	212
Designing Forms for Concrete Walls .....	213

Physical Properties and Allowable Stresses for Lumber .....	215
Physical Properties and Allowable Stresses for Plyform .....	215
Table of Equations for Calculating Allowable Span Lengths for Wood Beams and Plywood Sheathing .....	215
Design of Forms for a Concrete Wall .....	220
Lateral Pressure of Concrete on Forms .....	222
Plyform Sheathing to Resist Pressure from Concrete .....	222
Summary of Allowable Span Lengths for the Sheathing .....	224
Studs for Support of Plyform .....	225
Bearing Strength between Studs and Wale .....	226
Size of Wale Based on Selected 24 in. Spacing of Studs .....	227
Strength Required of Ties .....	229
Results of the Design of the Forms for the Concrete Wall .....	229
Tables to Design Wall Forms .....	230
Calculating the Allowable Concrete Pressure on Plyform .....	231
Allowable Pressure Based on Fiber Stress in Bending .....	233
Allowable Pressure Based on Bending Deflection .....	234
Allowable Pressure Based on Shear Stress .....	235
Allowable Pressure Based on Shear Deflection .....	235
Maximum Spans for Lumber Framing Used to Support Plywood .....	235
Using Tables to Design Forms .....	240
Forms for Walls with Batters .....	240
Forms for Walls with Offsets .....	241
Forms for Walls with Corbels .....	242
Forms for Walls with Pilasters and Wall Corners .....	243
Forms for Walls with Counterforts .....	243
Forms for Walls of Circular Tanks .....	244
Form Ties .....	246
Snap Ties .....	246
Coil Ties .....	247
Taper Ties .....	249
Coil Loop Inserts for Bolt Anchors .....	250
Prefabricated Wood Form Panels .....	251
Commercial, or Proprietary, Form Panels .....	253
Gates Single-Waler Cam-Lock System .....	253

**xii Contents**

Forms for Pilasters and Corners .....	255
Ellis Quick-Lock Forming System .....	257
Jahn System for Wall Forms .....	260
Forms for a Concrete Wall Requiring a Ledge for Brick .....	269
Forms for a Stepped Concrete Wall .....	269
Modular Panel Systems .....	269
Hand Setting Modular Panels .....	272
Gang-Forming Applications .....	272
Gang Forms .....	274
Forms for Curved Walls .....	276
Jump Form System .....	278
Self-Lifting Wall-Forming System .....	280
Insulating Concrete Forms .....	281
References .....	282
<b>10 Forms for Columns .....</b>	<b>283</b>
General Information .....	283
Pressure on Column Forms .....	283
Designing Forms for Square or Rectangular Columns .....	284
Sheathing for Column Forms .....	286
Maximum Spacing of Column Clamps Using S4S Lumber Placed Vertical as Sheathing .....	286
Example 10-1 .....	287
Plywood Sheathing with Vertical Wood Battens for Column Forms .....	288
Tables for Determining the Maximum Span Length of Plyform Sheathing .....	290
Maximum Spacing of Column Clamps Using Plyform with Vertical Wood Battens .....	292
Example 10-2 .....	293
Column Clamps for Column Forms .....	296
Design of Wood Yokes for Columns .....	296
Example 10-3 .....	298
Example 10-4 .....	299
Steel Column Clamps with Wedges .....	300
Example 10-5 .....	301
Concrete Column Forms with Patented Rotating Locking Device .....	303
Column Forms Using Jahn Brackets and Cornerlocks .....	305
Modular Panel Column Forms .....	306
Adjustable Wraparound Column Forms .....	308
All-Metal Forms for Rectangular Forms .....	308

Fiber Tubes for Round Columns .....	311
Steel Forms for Round Columns .....	312
One-Piece Steel Round Column Forms .....	314
Plastic Round Column Forms Assembled in Sections .....	315
Spring-Open Round Fiberglass Forms .....	316
One-Piece Round Fiberglass Column Forms .....	317
References .....	318
<b>11 Forms for Beams and Floor Slabs .....</b>	<b>319</b>
Concrete Floor Slabs .....	319
Safety of Slab-Forming Systems .....	320
Loads on Concrete Slabs .....	320
Definition of Terms .....	321
Design of Forms for Concrete Slabs .....	322
Spacing of Joists .....	322
Example 11-1 .....	324
Use of Tables to Determine Maximum Spacing of Joists .....	325
Size and Span Length of Joists .....	327
Example 11-2 .....	330
Example 11-3 .....	331
Use of Tables to Determine the Maximum Spans for Lumber Framing Used to Support Plywood ....	332
Stringers .....	337
Ledgers .....	338
Forms for Flat-Slab Concrete Floors .....	338
Forms for Concrete Beams .....	340
Spacing of Shores under Beam Bottoms .....	341
Example 11-4 .....	341
Example 11-5 .....	343
Example 11-6 .....	346
Forms for Exterior Beams .....	348
Form Details for Beams Framing into Girders ....	349
Suspended Forms for Concrete Slabs .....	350
Designing Forms for Concrete Slabs .....	351
Design of Formwork for Flat-Slab Concrete Floor with Joists and Stringers .....	353
Loads on Slab Forms .....	354
Plywood Decking to Resist Vertical Load ...	354
Joists for Support of Plyform .....	356
Stringers for Support of Joists .....	358
Shores for Support of Stringers .....	360
Design Summary of Forms for Concrete Slab .....	361

**xiv Contents**

Minimum Lateral Force for Design of Slab Form–Bracing Systems .....	363
References .....	364
<b>12 Patented Forms for Concrete Floor Systems .....</b>	<b>365</b>
Introduction .....	365
Ceco Flangeforms .....	365
Adjustable Steel Forms .....	366
Ceco Longforms .....	367
Ceco Steeldomes .....	369
Ceco Fiberglassdomes .....	370
Ceco Longdomes .....	370
Plastic Forms .....	371
Corrugated-Steel Forms .....	373
Cellular-Steel Floor Systems .....	373
Selecting the Proper Panel Unit for Cellular-Steel Floor Systems .....	374
Horizontal Shoring .....	375
References .....	379
<b>13 Forms for Thin-Shell Roof Slabs .....</b>	<b>381</b>
Introduction .....	381
Geometry of a Circle .....	381
Example 13-1 .....	382
Locating Points on a Circle .....	383
Elevations of Points on a Circular Arch .....	385
Example 13-2 .....	386
Forms for Circular Shell Roofs .....	386
Design of Forms and Centering for a Circular Shell Roof .....	387
Space the Joists .....	387
Space the Ribs .....	388
Design the Ribs .....	388
Determine the Load on the Shores .....	390
Determine the Elevations of the Top of the Decking .....	391
Determine the Slope of the Decking at the Outer Edges .....	391
Centering for Shell Roofs .....	391
Use of Trusses as Centering .....	392
Decentering and Form Removal .....	394
<b>14 Forms for Architectural Concrete .....</b>	<b>395</b>
Forms for Architectural versus Structural Concrete .....	395
Concrete Coloring .....	396

	Stained Concrete .....	396
	Stamped Concrete .....	397
	Form Liners .....	397
	Sealing Form Liner Joints .....	399
	Smooth-Surfaced Concrete .....	399
	Hardboard .....	399
	Wetting and Oiling Forms .....	400
	Nails for Forms .....	400
	Form Ties .....	400
	Construction Joints .....	401
	Detailing Forms .....	402
	Order of Erecting Forms for a Building .....	402
	Order of Stripping Forms .....	405
	Wood Molds .....	405
	Plaster Waste Molds .....	406
	Plastic Molds .....	408
	Metal Molds .....	408
	Forms for Corners .....	410
	Forms for Parapets .....	411
	Forms for Roof Members .....	411
	References .....	413
<b>15</b>	<b>Slipforms .....</b>	<b>415</b>
	Introduction .....	415
	The Forms .....	415
	Sheathing .....	418
	Wales or Ribs .....	418
	Yokes .....	418
	Working Platform .....	419
	Suspended Scaffolding .....	419
	Form Jacks .....	419
	Operation of Slipforms .....	422
	Constructing a Sandwich Wall .....	422
	Silos and Mills .....	423
	Tall Bridge Piers .....	424
	Towers .....	425
	Concrete Buildings .....	426
	Linings for Shafts .....	428
	Slipforms for Special Structures .....	429
	References .....	430
<b>16</b>	<b>Forms for Concrete Bridge Decks .....</b>	<b>431</b>
	Wood Forms Suspended from Steel Beams .....	431
	Example 16-1 .....	431
	Wood Forms for Deck Slab with Haunches .....	437

**xvi Contents**

Wood Forms for Deck Slab Suspended from Concrete Beams .....	438
Forms for Overhanging Deck Constructed on Exterior Bridge Beams .....	438
Deck Forms Supported by Steel Joists .....	439
Example 16-2 .....	444
Deck Forms Supported by Tubular Steel Scaffolding .....	446
Adjustable Steel Forms for Bridge Decks .....	447
All-Steel Forms for Bridge Structures .....	449
References .....	450
<b>17 Flying Deck Forms .....</b>	<b>451</b>
Introduction .....	451
Advantages of Flying Forms .....	451
Form-Eze Flying Deck Forms .....	454
Versatility of Forms .....	456
Patent Construction Systems .....	460
References .....	463
<b>A Dimensional Tolerances for Concrete Structures .....</b>	<b>465</b>
